

Spring Checklist

by Chandler Inspections

Springtime is here meaning time to get rid of the winter chronicles!

It's the perfect time to get your ductwork cleaned, gutters cleaned, furnace serviced, and conduct a roof inspection for any mildew or moss.

Cleaning Ductwork:

Prevents any large amount of dirt, debris or dust collection in your ductwork. This really helps for any home owners or residents in the home who may have allergy issues. Ensure all duct work is properly sealed shut.

Cleaning Gutters:

Safely and properly remove any leaves or debris detected inside of the gutters. Ensure all extended downspouts are 6 feet away from the home. This is important to ensure there is no water build up or rushing back towards the foundation.

Roof Inspection:

Roof inspections after the winter months are important to ensure there is no massive amount of damages, mildew or moss. A small amount of moss and mildew is normal due to weather changes. We suggest having your roof serviced and clean to increase the lifespan of your roof.

Furnace Inspection:

Turning off your furnace for the spring and summer months, be sure to switch out your furnace filter every 3-4 months. It's a great idea to have your furnace serviced, so when it's time to use it again that step has already been completed. Having your furnace serviced ensures you a peace of mind and gives you the opportunity to save up if you detect any defects in your furnace.
