

# Fall Checklist

by Chandler Inspections

## **Service and cover up your A/C units.**

Now is the perfect time to get your air conditioning unit serviced and covered up before winter hits! This will ensure your air conditioning units last longer, and are ready when you need

## **Get your chimney inspected.**

If you have a fireplace in your home, we suggest getting your chimney inspected now before the winter hits. This will ensure when the time comes to use it, it will work

## **Test your smoke / carbon monoxide detectors**

Before long those furnaces will be kicking on for the fall and winter months, so for safety sake it's a good idea to test your smoke and carbon monoxide detectors to ensure they're working properly.

## **Change your furnace filters**

We always recommend changing your furnace filters between seasons to ensure the cleanest air and smoothest operation.

## **Get a Radon Test**

With temperatures dropping outside, it's more than likely you'll spend much more time indoors. Consider getting a radon test to be sure your levels are below the acceptable standards while you're spending more time inside.
